Today i learned about all the essentials of git like how to check version and how to show up directories. I learned about git commands like git init, git push, git pull, git merge, git checkout and many more and learned all the functions which i practiced. Repositories pushing to origin. how to collaborate how to contribute in any project.

learned about gitignore file which ignores logs and values which we dont want to be publish in git repository in github. SSH security. forking someone else's repository when you try to work on your code or maybe contribute something to theirs. I basically got to know all the basics of git and i will practice it more to get use to it.
